Identity, Surveillance, Security by NAYAN AI

Our Services

Image Analytics
Image analysis is the process of breaking down an image into its basic components in order to extract relevant information. Find similar faces from group/single image, object detection.

EXPLORE

Video Analytics
IP video is transformed into corporate intelligence through video analytics. Video analytics are a highly cost-effective way to automate command and control.

EXPLORE

Object Detection
Object recognition is the branch of artificial intelligence concerned with the ability of an AI Engine to recognise things and entities. Object recognition enables robots

EXPLORE

Deep learning & AI solution to enable computers interpret the visual world better than humans

Face Recognition
Identify & recognize with facial features in live video, images or recordings

Image Analytics
Logically analyse and interpret information from visuals and graphics

Video Analytics
Derive actionable & quantifiable insights from live or video recordings

Object Detection
Detect, classify and analyse objects in live feed, images or videos

Benefits:

Improved Authentication

Mass Surveillance

Enhanced Security
